

IN4080

Natural Language Processing

27. Aug

Lab sessions

Thursday (10:15 - 12:00)

Helene Bøsei Olsen helenbol@uio.no

Hannah Clausen hannacla@ifi.uio.no

Lab sessions

Purpose:

- Apply concepts from the lectures in practice
- Get experience with methods and tools
- Get to know your peers

Format

- Work on exercises and mandatory assignments
- Opportunity to discuss theory in a practical context
- Quiz: recap on concepts from the lecture

Support

- Peer support is encouraged: collaborate and learn from each other

Plan for today

- **Practical information**
- **Who's in the room?** Quick poll on Menti
- **Set up programming environment**
- **Exercises in Jupyter Notebook**
- **? Recap quiz** - Important concepts from the lecture

Practical info

Course web page: <https://www.uio.no/studier/emner/matnat/ifi/IN4080/h26/index.html>

Github: <https://github.uio.no/IN4080/2026>

Discourse: <https://discourse.uio.no/c/in4080-26h/946>

Important dates

- **4 Mandatory assignments**
 - Practical programming assignments
 - Pass/fail grading, prerequisite for final exam
- Final written exam **December 18, 15:00 – 19:00**
(4 hours)

Mandatory assignments

- Read instructions carefully
- *The preferred format for the assignments is a completed version of the **Jupyter notebook***
 - containing both your code and explanations about the steps you followed.
- To pass each assignment, you will need to gather **at least 12 / 20 points**.
 - If you are sick, you can ask for a 3-day extension (via email or on Devilry **before the deadline**)
 - If you fail first attempt, you can get a second attempt to solve the assignment.
- The assignments need to be submitted through the Devilry portal .

Using LLMs for obligatory assignments

Allowed:

- Use LLMs (e.g., ChatGPT) as a *sparring partner*
 - Ask for clarifications on concepts you don't understand
 - Use them to support your learning process

Not allowed

- Generating solutions (in part or in full) to assignment tasks
- Copy-pasting code or answers from LLMs

Important

- Turn off Copilot or other LLM tools in VSCode (or other editors) to avoid auto-generated solutions

Instructions

What study program are you in?

I have experience in:

I am confident in using

Python

Jupyter Notebook

Programming environments (Eg., Conda)

Strongly disagree

Strongly agree

I found the first two lectures to be:

Interactive part: Let's create some vectors!

Purpose:

- Getting to know the people around you by creating five-dimensional feature vectors.

Format:

- Step 1: Choose the five dimensions you think are the most informative about a person.
- Step 2: Based on the rating, create your own feature vector.
- Step 3: Talk to the person next to you and compare your feature vectors.

Step 1: Choose the five most informative dimensions

0

No of tokens in
your name

0

Birthday month

0

Coffee or tea

0

Favourite
season (e.g.,
winter)

0

Favorite meal
(e.g., lunch)

0

Sweet or savory

0

Dogs or cats

0

Early bird or late
night owl

0

City or nature

Step 2: Create your own feature vector

- What are the dimension of our space?
- What are the values of the features?

Step 3: Talk to the person next to you and compare your feature vectors

- How similar are your feature vectors?
- Do you have ideas for more informative features?

Plan for today

- ~~Practical information~~
- ~~Who's in the room?~~ Quick poll on Menti
- Set up programming environment
- Exercises in Jupyter Notebook
- ? Recap quiz - Important concepts from the lecture

Mandatory assignment 1 is published

The submission deadline: **Friday, September 11, 23:59**

<https://github.uio.no/IN4080/2026/tree/main/oblig1>
